

Fresh Air Control Technology™ (FACT™)

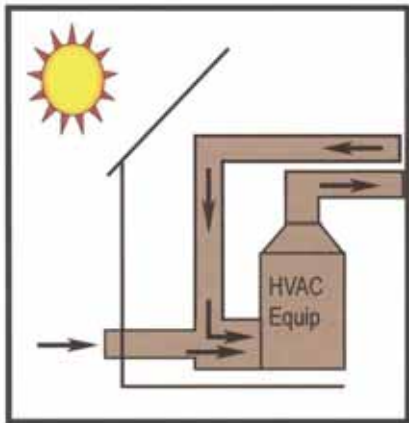

**Fresh Air
on Demand**

**The FACT™
System brings
in fresh air
anytime you want**

Fresh Air

Filtration, purification and duct cleaning are important parts of Indoor Air Quality; but the most critical part is air change.

The FACT™ System lets you decide how much fresh air to

bring in and under what conditions.

Use an enthalpy control, outdoor thermostat and/or a

timer to limit when outdoor air is brought in.

Free Cooling

Coolmizer™ Operation - On a call for cooling, if outdoor conditions are acceptable, the system will lock out the compressor and open a damper to bring in its full cooling requirement.

SmartSlave™ Zone

Customized Comfort with Arzel® SmartSlave Technology

The SmartSlave™ Zone opens and closes dampers to regulate temperature and ventilation in zones not requiring control of the equipment. The SSZ™ compares the thermostat call to the current equipment output. If they match it will provide air to the zone. Otherwise the zone will not be served. The SSZ™ acts as a slave to the system, not any particular zone.

Applications:

- ◆ Small Zones (less than 10% of the total CFM)
- ◆ Seldom Used Spaces (Spare Bedrooms, Storage areas)
- ◆ Spaces that need special control (Master Bath, Finished Basement)
- ◆ Commercial Applications (Small Offices, File Rooms, Equipment Closets)
- ◆ Interface Applications: SSZ™ can be used to integrate Arzel dampers with any contact closure.
- ◆ Add a Zone to an existing Arzel Zone Control System

Can be installed either in the factory or in the field

***Ultimate Control for Small
or Lower Priority Spaces***
