

# Universal ModuPASS™

Theories on bypass sizing have evolved over the last 50 years. Equipment manufacturers have changed the dynamics of airflow by introducing new innovative technologies. This has left literally thousands of systems working well below peak effectiveness.

The Universal ModuPASS™ changes all that. It is a complete modulating bypass control in a single box that easily retrofits into any zoning system on the market. The ModuPASS™ provides a very stable static pressure environment required by today's high-tech, variable speed blowers.

Now you can dial-in exactly the static pressure that you need to optimize equipment effectiveness and maximize customer comfort.
