

## THE SCIENCE OF HIGH VELOCITY ZONING

SDHV or Small Duct, High Velocity comfort systems offer contractors a tremendous opportunity to provide comfort to a larger and ever demanding residential and commercial HVAC market. Historical buildings, structures with architectural constraints or buildings that incorporate radiant, steam, or hot water heating are a perfect match for a high velocity cooling system. Couple that with an Arzel® Zonocity™ zoning kit and provide the control to complete the comfort package.

- Create up to 3 comfort zones with individual thermostats and one air handler
- Kit utilizes the proven 202 or 203 MPS™ panel with patented, air driven, EzySlide™ round or rectangular dampers
- Reduce the cost and space requirements associated with multiple systems
- Arzel® Zonocity™ controls integrate easily with hydronic or any secondary heating source
- The Zonocity™ kit simplifies the ordering process while speeding up installation times

### Kit contains

202 or 203 panel  
Transformer  
Instructions  
100 feet of tubing

Dampers based on system requirements

**Proven Arzel® product  
reliability and ten-year  
damper warranty**
