Profitable

Zoning Expands Your Business Opportunities

How many of the following types of businesses do you pass everyday on your way to service or sales calls?

- Strip Malls
- Office Buildings
- Theaters
- Restaurants
- Health Clubs
- Auto Dealers
- Repair Shops
- Daycare Facilities
- Private Schools
- Nursing Homes
- Churches
- Manufacturers

ALL OF THEM!

Don't miss your opportunity to easily expand your business and provide more comfort and better indoor air quality to your customers.

Control energy costs while improving comfort with the industry's most innovative zoning systems

Simple

Arzel Zoning Technology, Inc. has designed a system with a simple installation process, saving you and your customers valuable time on labor. One control panel handles all the systems used in light commercial construction, including heat/cool, heat pumps, and multi-stage equipment.

Arzel's wireless, motorless dampers keep installation time and complexity to a minimum. Whether the dampers are installed directly into existing ductwork or part of a brand new system, they eliminate the need to reconfigure the layout of the system's ductwork.

Flexible

No two zoning projects are ever the same. Design requirements and building codes made a flexible system design necessary, and Arzel's zoning system is a perfect fit no matter what the application. It is readily expandable up to eight zones, so your customer can add more zones as their business grows or requirements change.

Multiple pressure relief options are available to meet most design requirements. Choose from static pressure control bypass dampers, barometric bypass dampers, or a multi-solution approach, with many standard sizes in stock, and custom sizes are available upon request. The simple-to-use Bypass Chart will assure maximum air delivery with minimum objectionable air noise.

Reliable

Reliable performance is the key to getting and retaining business. It means no unscheduled call-backs for you and worry-free operation for your customers. All of Arzel's components are backed by an industry-leading lifetime warranty. They have been designed to handle the wear and tear in light commercial applications and have been field-tested to ensure maximum reliability.

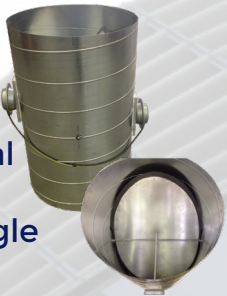

Offer the Complete Comfort Solution!

AirBoss has the flexibility to control single or multi-stage equipment, including heat pumps.

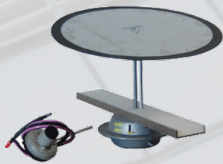

- Selectable change-over priority - auto heating or cooling
- LED status indicators
- Modulating bypass port
- Dual fuel compatible
- Leaving air temp sensor included
- 2, 3, 4, 6, & 8 zones

- 16", 18", & 20" stock sizes
- Uses Ezyslide gasket material
- Dual actuator
- Oval blade moves at a 45 angle

The ModuPass System works with variable speed motors and constantly monitors the static pressure in the trunk and adjusts to allow the prescribed amount of bypass air.

- 8", 10", 12", & 14" stock sizes
- Works with variable speed motors

Barometric Dampers

- Round & rectangular stock sizes available
- Well suited for non-variable speed blowers
- Economical solution for objectionable air noise
